

Data Dictionary

Term	Description
User	A person interacting with the app, e.g., student, working adult, or low-income household, seeking to manage food costs and nutrition.
Budget	The spending limit set by the user, in SGD, applied daily or weekly.
Food Item	Any individual food product such as rice, chicken, eggs, oil, or hawker dishes, tracked for price, nutrition, and availability.
CPI (Consumer Price Index)	Government-provided index tracking changes in prices of food items over time, used to assess inflation.
Import Data	Quantity and type of food imported into Singapore, used to assess national dependency on external sources.
Import Dependency Percentage	The proportion of a food item imported relative to total consumption.
Import Risk Level	Classification of a food item's import dependency (Low, Medium, High) indicating vulnerability to supply shocks.
Calorie Target	Desired calorie intake range specified by the user.
Dietary Preference	Restrictions or choices regarding food, e.g., halal, vegetarian, no pork, calorie limits.
Meal Type	Indicates whether the meal is prepared at home (cook-at-home) or purchased at hawker/restaurant.
Meal Plan	A structured schedule of meals for a day or week including items, quantities, costs, and nutrition.
Swap Option	An alternative food item or meal recommended to replace another, usually for cost savings or nutritional balance.
Hawker Stall	A food vendor in a hawker centre, with specific location and cuisine type, serving meals to users.
Estimated Savings	The amount of money a user can save by choosing an alternative meal or grocery item.
Grocery Item	An individual ingredient or product that can be purchased and substituted in a shopping basket.
Grocery Basket	A collection of grocery items representing a shopping list or planned purchase for the user.

Substitution	Replacement of a grocery or meal item with a similar one to reduce cost, meet dietary rules, or improve nutrition.
Recomendation	Any suggested swap, substitution, or plain item generated by the system.
